Introduction

Local Language Labels allow the Scrutineer to customize some of the Forms and Reports produced by this Application.

While Microsoft has its own language and keyboard options, there are times when DanceSport terminology can pose a unique challenge. For this reason Scrutineers can insert a custom label which will be used when generating reports, etc.

This function is accessed through the Configuration Menu.

Once the Configuration Menu is open, Click on the **Local Language** Tab.

Where are Local Language Labels Stored?

As expected, the Scrutineer will insert into the text boxes the 'label text' that he/she wants to be displayed, when this is done the Application will automatically save the Language.txt file.

The Language.txt file is saved in the \Data folder of the Application. For example, an Application running in the Server dancescore folder will have the file path:

C:\dancescore\Data\Language.txt

This Language .txt file can be copied easily from one location to another, and a copy can also be renamed & stored for future reference.

NOTE: When the Application cannot find the Language.txt file, the default (English) labels will be loaded into the system.

Future Considerations?

It should be noted that these labels are being constantly reviewed, and it is highly likely that more Local Language Labels will be added.

The addition of labels depends on the feed back received from Scrutineers and Users, so if you want an addition reviewed, please contact the office.
